Problem Statement

Common Issues Faced by Industries:

- ✗ Manual gatepass entries
- ✗ Inefficient visitor tracking
- ✗ Vehicle entry delays
- ✗ No system for meeting room usage
- ✗ Poor data visibility & security risks

Imagine this:

- ⊖ A visitor enters your premises without prior approval, the gatekeeper manually writes their name, and there's no check-out record.
- ⊖ A vehicle request goes through WhatsApp with no tracking.
- ⊖ Employees wait for approvals on paper forms.
- ⊖ Meeting rooms are booked verbally—confusion and double-bookings occur.

How It Works

flowchart with steps

Visitor Process

- Register with OTP verification
- Capture Photo , Complete Profile
- Create gatepass if not exist.
- Wait for approval by respective authority
- Show QR Code generated on approval at security gate.
- Mention accessories and capture realtime photo while checkin.
- Request checkout approval to authority.
- Show QR at security gate and checkout.

Employee Process

- Create gatepass from mobile app
- Link sent to visitor by SMS
- Visitor need to capture photo by opening link
- Show QR Code generated on approval at security gate.
- Mention accessories and capture realtime photo while checkin.
- Request checkout approval to authority.
- Show QR at security gate and checkout.

How It Works

flowchart with steps

Employee Gatepass

- Login to app
- Navigate to Gatepass => employee
- Select authority to request permission from
- Fill for and Wait for approval
- Show QR Code generated on approval at security gate.
- While check in back show same QR to security gate KIOSK and proceed

Vehicle Requisition

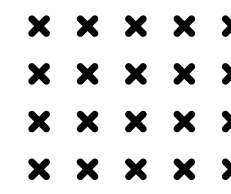

- Login to app
- Navigate to Vehicle Request
- Select authority to request permission from
- Fill for and Wait for approval
- Show QR Code generated on approval at security gate.
- While check in back show same QR to security gate KIOSK and proceed

3 Stage approval is here Authority,HR and Security
